1 Data quality checks of the new EUTL data used for the update of the EEA's EU ETS data viewer

1.1 Key findings

- The EUTL extract provided by the European Commission on April 2, 2019 contained 17 384 installations-rows. The dataset used for the ETS data viewer includes 17 367 entities:
 - 15 822 stationary and 1 545 aviation operators
 - 12 742 open and 4 625 (27% of total) closed entities
 - 3 236 entities (19% of total) not operating in the third trading period
- 24 entities entered the trading system between April 2019 and May 2019.
- Total verified emissions 2018 from stationary installations sum up to 1 674 Mt in the actual dataset.
- To align the dataset with the EU ETS registry, the information on excluded emissions provided since April 2018 has been used: For excluded entities, verified emissions and allocation have been deleted in the year of exclusion. For details see section 1.2.3.
- One permit ID in Malta (MT-3) for a new power plant (included since April 2018) had been allocated to two installation identifiers. One of those has been deleted (MT 210138) as it seems to be additional without intention.
- One aviation operator seems to be included twice and has been deleted (**NL 202792**) (section 1.5.2).
- Comparison of the dataset provided by the European Commission to EEA with the public extract published on the Commission's website:
 - There is a discrepancy between the dataset and the public extract: in the dataset, **DE 200696** (Croatia Airlines hrvatska zrakoplovna tvrtka d.d.) belongs to Germany, while it belongs to Croatia in the public extract and on the EUTL website (see section 0). Ronald Velghe states that the country code of the address seems to be wrong as the contact is located in Croatia. Therefore, this entity has been reallocated to Croatia in the dataset for the ETS data viewer.
- 23% of the operators report outdated activity type codes, which correspond to the second trading phase and which have been translated to new activity type codes. The resulting percentage changes in some activity type codes are still high but have been reduced compared to last year (see Table 1-3).
- 3 permit identifiers seem to have changed compared to the previous extract (see section 1.6.4).

1.2 Preparation of the data

1.2.1 Data capture from Commission Excel file

The European Commission extracted data from the EUTL on May 3, 2019 and provided this extract to the EEA (referred to as “extract for EEA” in the text). The data used for the ETS data viewer¹ is based on this extract.

It contained 17 384 installations-rows with detailed information. After joining the rows for installations from CY and MT it ends up in **17 368 entities** (minus 13 for Cyprus, minus 2 for Malta).

In processes before, only two installations have been deleted for Malta (two power stations that are part of the ETS since its start in 2005). Since April 2018, there are two additional LNG fuelled power plants^{2,3} with activity codes 20 that entered the ETS in 2017. Both use the same permit identifier MT-3 but they have different installation IDs: MT 209863 and MT 210138. It seems like the plant is included twice with two different permit identifiers. That is why the latter has been deleted since no additional information is given compared to the first, verified emissions and surrendered allowances are reported only for the first installation mentioned.

There is also one aircraft operator which seems to be included twice and which has been deleted (NL 202792, see section 1.5.2)

The dataset used for the ETS data viewer hence includes **17 367 entities**.

1.2.2 Results of plausibility checks

No MS-IDs are doubled.

Compared to the dataset of April 2019, no installation is missing and 24 new installations were added to EUTL.

In Austria, Germany, France, Italy, Sweden, United Kingdom “Permit Entry dates” are partly showing the start year of the installation operation and not the entry date into the EU ETS.

1.2.3 Changes within the dataset

In April 2018 new columns were inserted into the extract for EEA: From 2013 onwards a column per year states if an entity was excluded from the ETS in that particular year. A reason for annual exclusion of entities can e.g. be low production / emissions or a small number of flights in the scope of the EU ETS. An entity that was excluded in one year can be part of the ETS again in following year(s).

¹ <https://www.eea.europa.eu/data-and-maps/dashboards/emissions-trading-viewer-1>

² <https://www.wartsila.com/twentyfour7/energy/malta-prepares-for-an-lng-powered-future>

³ <https://www.aecom.com/hk/projects/electrogas-malta/?ql%5B0%5D=260&qp=&qt=12>

The information on annual exclusion is not directly linked to account status. Most of the entities with closed accounts are marked as “included” which does not seem completely consistent.

Furthermore, there are entities which show ETS information (verified emissions, allocations or surrendered units) in the database provided to EEA by the Commission although these entities have been excluded in that year. In the EU ETS registry, these entities do not show verified emissions if they are excluded in a year. To harmonize the EEA data viewer with the EU ETS registry it has been decided by EEA in May 2018 to delete verified emissions and allocations of all excluded entities. Surrendered units are kept for excluded entities because these units can also be used to cover emissions from earlier years. The amount of deleted verified emissions and allocations can be seen in Table 1-1. Entities with an indication of zero for any ETS information have not been counted here.

Table 1-1 Overview of excluded and therefore deleted verified emissions and allocations from 2013 to 2018

	Number of excluded entities in single years	of which with				Deleted amounts			NOT deleted amounts <i>Surrendere d units</i>
		of which with VE	Allocations	Allocated Reserve	Surrendered units	VE	Allocations	Allocated Reserve	
2013	1,343	30	215	0	95	25,715	283,234	0	29,041
2014	1,319	1	203	0	83	6,509	182,016	0	162,216
2015	1,348	2	224	0	25	86	285,713	0	8,046
2016	1,346	0	222	0	19	0	247,310	0	14,293
2017	1,345	0	231	2	28	0	241,327	1,182	6,410
2018	1,238	1	230	2	23	1,304	251,717	644	3,344
Total	7,939	34	1,325	4	273	33,614	1,491,317	1,826	223,350

Source: *EUTL extract May 3, 2019, own calculation; Entities with an indication of zero for any ETS information have not been counted here.*

1.3 Comparison of the dataset provided by the Commission and the Excel file published on the Commission's website

A quick comparison between ETS data from the registry as published on the Commission's website⁴ and the extract for EEA directly provided by the Commission on May 3, 2018 was performed but not as deeply as in April 2019.

1.3.1 Comparison of installation-IDs

The first check concerns the included installations. In the extract for EEA, the aircraft operator with the ID “DE 200696” (Croatia Airlines hrvatska zrakoplovna tvrtka d.d.) is allocated to Germany, while it belongs to Croatia in the Excel file published on the Commission's website. As hence the country code of the address seems to be wrong, this entity has been reallocated to Croatia in the EEA dataset for the ETS data viewer.

⁴ https://ec.europa.eu/clima/sites/clima/files/ets/registry/docs/verified_emissions_2017_en.xlsx

1.4 Consistency checks within the dataset

These checks have not been performed for the May 2018 dataset.

1.5 Update of the disaggregated database (installation level)

Some changes have been implemented in the disaggregated database (to be used for the EEA EU ETS data viewer), compared to the extract provided by the Commission:

Rows

- One aviation operator has been deleted (NL 202792) (see 1.5.2).

Columns

The following four columns were added to the EUTL extract:

- “MS-ID” as a combination of Country Code and Installation Identifier
- “Entry Year” with only the year of “Permit Entry Date”
- “Closure date” with either only the year of “Account closure” or the note “open”
- “Active installation in 3 TP” with the values yes or no where yes indicates that the given year of last emissions of an entity is either 2013 or after or an empty cell, no indicates that the given year of last emissions is between 2005 and 2012 (see 1.5.6).

Content

- Due to information in the public dataset, one aviation operator (DE 200696) has been allocated to Croatia instead of Germany (see 0).
- Main activity codes 1-9 have been translated to new codes (see 1.5.5).

The total amount of installations included in Access is now 17 367.

1.5.1 Integration of missing installations

Not necessary.

1.5.2 Deletion of double installations

Due to the comparison of information on returned allowances from aviation operators for the year 2012, which has been conducted in the April 2015, it became obvious, that two aviation operators are included in the extract which are doubled (GB 202618 and 202850 and NL 202792 and 202833).

In the most actual dataset it can be seen that GB 202850 has been closed in May 2015 and that only 2012 emissions, allocation and surrendered units have been included. Since July 2017 GB 202618 was no longer included in the extract for EEA.

NL 202792 has a closure date in 2013 and does not include any ETS information at all but has the same operator name as NL 202833. For the latter ETS information is given including emissions in 2012. Therefore, NL 202792 has been deleted.

One Maltese installation (MT 210138) that is included since the April 2018 dataset has been deleted because it was included twice, see chapter 1.2.1.

1.5.3 Adjustment of free allowances for aviation operators for the year 2012

Free allowances for the year 2012 had to be returned by aviation operators if they chose to account for the reduced scope of the stop the clock decision.

The amount which had to be returned is publicly available on operator level. In addition, the Commission sent an excel file with details on amounts which finally had been returned and on the partial adjustment of the numbers in EUTL ("Aviation return before and after deadline.xlsx").

With information in this file, the adjustment of free allowances for 2012 takes place for the update of the EEA data viewer because it seems necessary to reflect the reduced amount of free allowances for the comparison with verified emissions.

The calculation of corrections has been conducted in April 2015.

As there have been no changes to free allocation for aviation in 2012 (see Table 1-10), no update of this correction has to be done.

1.5.4 Consistency check of surrendered units

There is no longer an inconsistency related to the sums of total ERU, CER and EUA compared with total units surrendered, as it has been revealed in the 2013 dataset.

1.5.5 Reallocation of main activity codes

New activity codes from 10-47 are in place since the start of the third trading period, but a lot of installations which already have been part of the EU ETS in the former trading periods did not change their activity codes.

In total, 3909 installations, so 23% of all installations, still report old activity codes (see Table 1-2). These are 9 less than in the dataset of April 2019.

Table 1-2 Number of installations with old activity type codes

MAIN_ACTIVITY_TYPE_CODE	Number of installations - September 2016	Number of installations - July 2017	Number of installations - July 2018	Number of installations - April 2019	Number of installations - May 2019
1	3471	3216	2846	2752	2745
2	51	48	41	39	38
3	3	3	3	3	3
4	4	4	4	4	4
5	77	74	49	47	47
6	192	176	133	129	129
7	163	148	112	110	109
8	614	579	563	560	560
9	390	358	284	274	274
Total	4965	4606	4035	3918	3909

Source: EUTL extract April 2, 2019 and former extracts, own calculation

Since 2015 the EU ETS data viewer no longer includes old activity codes except for code 99 which will remain as it is, if no other country specific information is available. For the installations reporting an old code, a correction will be made. Since 2015 the translation procedure follows the methodology explained in the ETC/ACM document "Attribution of new activity codes for installations with old codes in the EEA's EU ETS data viewer" (latest version as of April 2016⁵). The result of this methodology has been amended with country specific information. The translation table will be made publicly available to make the translation of activity codes as transparent as possible.

As highlighted in the methodology document, there is a risk that the number of installations allocated to activity codes 38 to 41 (Production of specific chemicals) are underestimated, because the allocation to these codes is not possible without further detailed knowledge of the activity of single installations. Consequently, there is also a risk that the number of installations allocated to activity code 42 (Production of bulk chemicals) is overestimated.

Looking at verified emissions 2018 (see Table 1-3), emissions of installations with code 42 still increased because of the allocation to new codes (from 36 to 38 Mt). But it can be considered that due to the inclusion of Member State specific information allocated verified emissions due to the translation process have decreased by a high amount of emissions: With the translation of September 2015, verified emissions of sector 42 has been 23 Mt before and 43 Mt after the translation (+20 Mt), whereas the difference has now been reduced to 2.5 Mt for the year 2018.

⁵http://acm.eionet.europa.eu/docs/ETCACM_EU-ETS_translation_of_activity_codes_April_2016_for_publication.pdf

Similarly, it is not possible to differentiate between the production of primary (code 26) and secondary aluminium (code 27) without more information on single installations. NACE code 24.42 (Aluminium production) has now been completely translated to code 26, leading to possible overestimation and an underestimation in code 27.

In September 2015 11 installations have been translated to code 26, whereas the number of installations which was translated in April was reduced to 7 (code 26).

Since the April 2018 dataset, there are two installations with activity code 45 (Capture of greenhouse gases under Directive 2009/31/EC) which did not occur in ETS before. These are installations in the United Kingdom which entered the ETS in 2017.

With the dataset of April 2019, an installation with activity code 46 appeared for the first time (Transport of greenhouse gases under Directive 2009/31/EC).

In September 2018 three installations (FR 956, SK 150, IT 515) have been reallocated from code 20 to code 24 after an exchange with Member States and their agreement, that these plants are foremost steel plants. This reallocation has been done again with the May 2019 update since the installations FR 956 and SK 150 were still allocated to the activity code 20. The installation IT 515 was allocated to activity code 24 between the April and May update 2019.

For further details, see Table 1-3:

Table 1-3 Allocation of new activity codes to installation with old codes

MAIN_ACTIV ITY_TYPE_C ODE	Before Translation		After Translation		Conducted Translation		Percentage of translation to total

Note: The total number of translations given in the table (3 909) is not the absolute number of translations

Source: EUTL extract May 3, 2019, own calculation

The EU ETS data viewer separates between stationary installations and aviation. The total number of **aviation operators** (activity type code 10) is **1 545**, so there are **15 822 stationary installations** included in the data viewer.

1.5.6 Information on active installations

The indicator “Active installation in 3 TP” has been included in the EU ETS data viewer since 2015. It indicates installations and operators which operate in the third trading period. This indicator is included by the ETC/CME. If the given year of last emission is

between 2005 and 2012, the indicator is “no”, if the given year of last emission is higher or equal 2013 or an empty cell, the indicator is “yes”.

This is to give the possibility to align the analysis of data from the EEA data viewer with the dataset published by the Commission.

1.6 Main changes in EU ETS viewer data between April 2019 and May 2019

1.6.1 Number of entities included in the scheme

The number of stationary installations and aviation operators by country is shown in the following table:

Table 1-4 Number of entities by country

Source: EUTL extract May 3, 2019 and former extracts, own calculation

As shown in Table 1-4, the May 2019 dataset includes 24 more entities than the April 2019 dataset.

Furthermore, as discussed in chapter 0, one entity has been transferred from Germany to Croatia.

1.6.2 Account closures

The indicator “account closure” is included in the dataset since May 2015. In May 2019, 12 742 entities have been indicated as open, 4 625 (27% of total) have a closure date that lies before the extraction date of the ETS dataset.

1.6.3 Active installation in 3 TP

3 236 entities – 19% of total – indicated that they are not operating in the third trading period. This number slightly increased (by 5) compared to the dataset of April 2019.

64 of those 3 236 entities no longer active in the 3rd trading period still have open accounts.

1.6.4 Permit identifier

For 3 entities, the permit identifier has been changed. They are all open installations. The activity type codes are 10 (located in France and Iceland) and 20 (located in the United Kingdom).

1.6.5 Verified emissions (stationary installations)

In the following table, data on verified emission is compared between the datasets from May 2019 and April 2019, just for stationary data. Differences are shown as percentages, calculated from the difference related to latest data.

Table 1-5 Changes in VE between datasets (calculated as difference between April 2019 and May 2019 data / VE (May 2019))

Source: EUTL extract May 3, 2019 and former extracts, own calculation

There are only changes in the third decimal places for the second trading period in Ireland but higher changes for the third trading period.

For 2018 many emission increases can be observed. This is due to the fact that in many cases the April data was not yet completely available on the key date.

1.6.6 Free allocation to existing installations from 2005 to 2018 (stationary installations)

In the same structure, the data on free allowances to existing installations allocated under Article 10a(1) has been compared:

Table 1-6 Changes in free allocation to existing installations (10a, 2005-2017) between datasets (calculated as difference between April 2019 and May 2019 data / allowances (May 2019))

For the third trading period, free allowances changed for several countries for the years 2014-2017, but the overall change for the 3rd trading period is insignificant. The only change above 1% is in Finland for 2018.

There are no free allowances for Malta in the third trading period.

1.6.7 Surrendered units from 2005 to 2017 (stationary installations)

The changes in surrendered units are shown in Table 1-7.

Table 1-7 Changes in surrendered units between datasets (calculated as difference between April 2019 and May 2019 data / allowances (May 2019))

There are no changes in surrendered units for all trading periods.

1.6.8 Free allocation from 2018 to 2020 (stationary installations)

The comparison of free allocation in the years 2018-2020 shows that there was a decrease of 0.1% for 2018 and increases of 0.3% of total allocation for 2019 and 2020. Decreases have taken place in Germany, Denmark, Spain, Finland, France, Hungary, Italia, Lithuania, Poland and Slovakia. Increases took place in the United Kingdom and Greece. The most significant changes can be observed for Romania. This is mostly due to changes for the installation RO 44.

1.6.9 Comparison of allocated amounts under Article 10a(1), 10a(7)and 10c for the years 2013 to 2018

Both prior comparisons of allocated amounts focussed only on those allocated under Article 10a. With the data sets from 2015 on, allocated amounts for new entrants (also called NER – new entrants reserve or just “reserve”; see Article 10a(7)) / and the transitional free allocation (10c) are separately shown by installations for the years from 2013 onwards.

Table 1-9 Allocated amounts for the years 2013 to 2018 for stationary installations

Purple: increase, light orange: decrease, green: zero difference

Sources: EUTL extract May 3, 2019 and former extracts, own calculation

NER allowances increased for some countries, especially in 2017 and 2018. As NER allocation is linked to putting into operation a new plant or a new part of it, high relative changes are not surprising.

In total, NER allowances increased by about 1.5% in 2017 and 2.9% in 2018. NER allowances for Spain increased by 11% in 2018 and 7% in 2017. Other countries with high increases are Belgium, Finland, France, United Kingdom, Hungary, Luxembourg, Lithuania, Poland, Portugal, Romania and Sweden.

10c allowances increased for Bulgaria, Estonia, Lithuania, Poland and Romania.

1.6.10 Aviation

For aviation a comparison of verified emissions, free allocation and surrendered units has been conducted together for the years 2012-2017.

Table 1-10 Changes in VE, free allocation and surrendered units to aviation operators (2012-2017) between datasets (calculated as difference between April 2019 and May 2019 data / allowances (May 2019))

MS	Percentages related to last available data (+ => increase)

Purple: increase, light orange: decrease, green: zero difference

Sources: EUTL extract May 3, 2019 and former extracts, own calculation

For aviation operators, there are only changes for verified emissions: They slightly increased for Germany, France, Ireland, Hungary and Portugal in 2017. Minor changes can also be observed for the years 2015 on in Italia. Significant changes occurred for Malta, with an increase of 7.5% for 2017. The large changes in 2018 are due to key date effects and will probably disappear with the next data update in July.

2 Aggregated database

Updated data for 2005 to 2020 on free allowances, for 2005-2018 on verified emissions and for 2005-2018 on surrendered units for all installations has been aggregated and integrated in the aggregated database.

3 Auctioning

Auctioning data has not changed qualitatively between April 2019 and May 2019.
