Bathing water quality in the season 2025

Poland

Under the provisions of the [Bathing Water Directive](#), about 22 thousand bathing waters are monitored in Europe each season. The monitoring data and other information regarding bathing water management are reported to the European Environment Agency by 29 reporting countries in Europe, to be assessed for the annual European report and more detailed national reports.

1. BWD reporting in the season 2025

Bathing waters in the season 2025		Bathing water quality in the season 2025	
Total reported	779	Excellent	457 (58.7%)
Coastal	190	Good	112 (14.4%)
Inland	589	Sufficient	41 (5.3%)
First identified in 2025	23	Poor	15 (1.9%)
Delisted in 2025	8	Not classified	154 (19.8%)
Total reported samples	3231		

The bathing waters are quality classified according to the two microbiological parameters (*Escherichia coli* and intestinal enterococci) defined in the Bathing Water Directive. 78.3%¹ of all reported bathing waters are in line with the minimum quality standards of the Directive, thus classified “sufficient” or better.

More information at the **national bathing water portal**:

<https://sk.gis.gov.pl/>

¹ The figure is a share of all *identified* bathing waters in the country, including those that are not quality classified due to lack of samples. In such case, the stated national share of “sufficient or better” cannot reach 100% even if all *classified* bathing waters are “sufficient or better”.

2. BWD monitoring

Each bathing water that is identified by the reporting country needs to have a monitoring calendar established before the bathing season. The monitoring calendar requirements can be summarised as follows: (1) a pre-season sample is to be taken shortly before the start of each bathing season; (2) no fewer than four (alternatively, three for specific cases) samples are to be taken and analysed per bathing season; and (3) an interval between sampling dates never exceeds one month.

From the reported data, the assessment also designates effective implementation of the monitoring calendar (Table 1).

Table 1: Bathing waters in 2025 according to implementation of the monitoring calendar

	Count	Share of total [%]
Monitoring calendar implemented All monitoring calendar conditions listed above are implemented at the bathing water.	708	90.9%
Monitoring calendar not implemented Not all monitoring calendar conditions listed above are implemented at the bathing water. It may be quality-classified if enough samples are available in the last assessment period.	71	9.1%

In addition to the monitoring calendar, management specifics of the last assessment period of four years are also assessed. The status primarily indicates whether the complete dataset of four seasons is available, but also points out the reasons as to why the bathing waters do not have the complete last assessment period dataset. The latter may indicate developing conditions at the site – most importantly, whether the bathing water has been newly identified within the period, or any changes have occurred that are likely to affect the classification of the bathing water.

Table 2: Management specifics in the last assessment period of 2022–2025

	Count	Share of total [%]
Continuously monitored A bathing water has been monitored in each bathing season of the last assessment period.	600	77.0%
Newly identified A bathing water was identified for the first time within the last assessment period. Such status is assigned for full four years after reported.	70	9.0%
Quality changes A bathing water was subject to changes described in BWD Art. 4.4 within the last assessment period. Such status is assigned for full four years after reported.	2	0.3%
Monitoring gap A bathing water was not monitored for at least one season in the last assessment period. No quality classification is made if not enough samples are reported for the most recent season.	107	13.7%

3. Bathing water quality

3.1 Coastal bathing waters

Coastal bathing waters are situated on the sea or transitional water coastline, with respective parameter thresholds defined in Annex I of the Directive. They are subject to more strict thresholds than the inland bathing waters. The quality trend is shown in Figure 1. Number of bathing waters by quality class for the last assessment period 2022–2025 is given in Annex I.

Figure 1: Trend of coastal bathing water quality. Notes: Each column represents an absolute number of bathing waters in the season. Quality classes “good” and “sufficient” are merged for comparability with the classification of the preceding Bathing Water Directive 76/160/EEC.

3.2 Inland bathing waters

Inland bathing waters are situated at rivers and lakes, featuring fresh water and with respective parameter thresholds defined in Annex I of the Directive. The quality trend is shown in Figure 2. Number of bathing waters by quality class for the last assessment period 2022–2025 is given in Annex I.

Figure 2: Trend of inland bathing water quality. Notes: Each column represents an absolute number of bathing waters in the season. Quality classes “good” and “sufficient” are merged for comparability with the classification of the preceding Bathing Water Directive 76/160/EEC.

Annex I Bathing water quality in 2022–2025

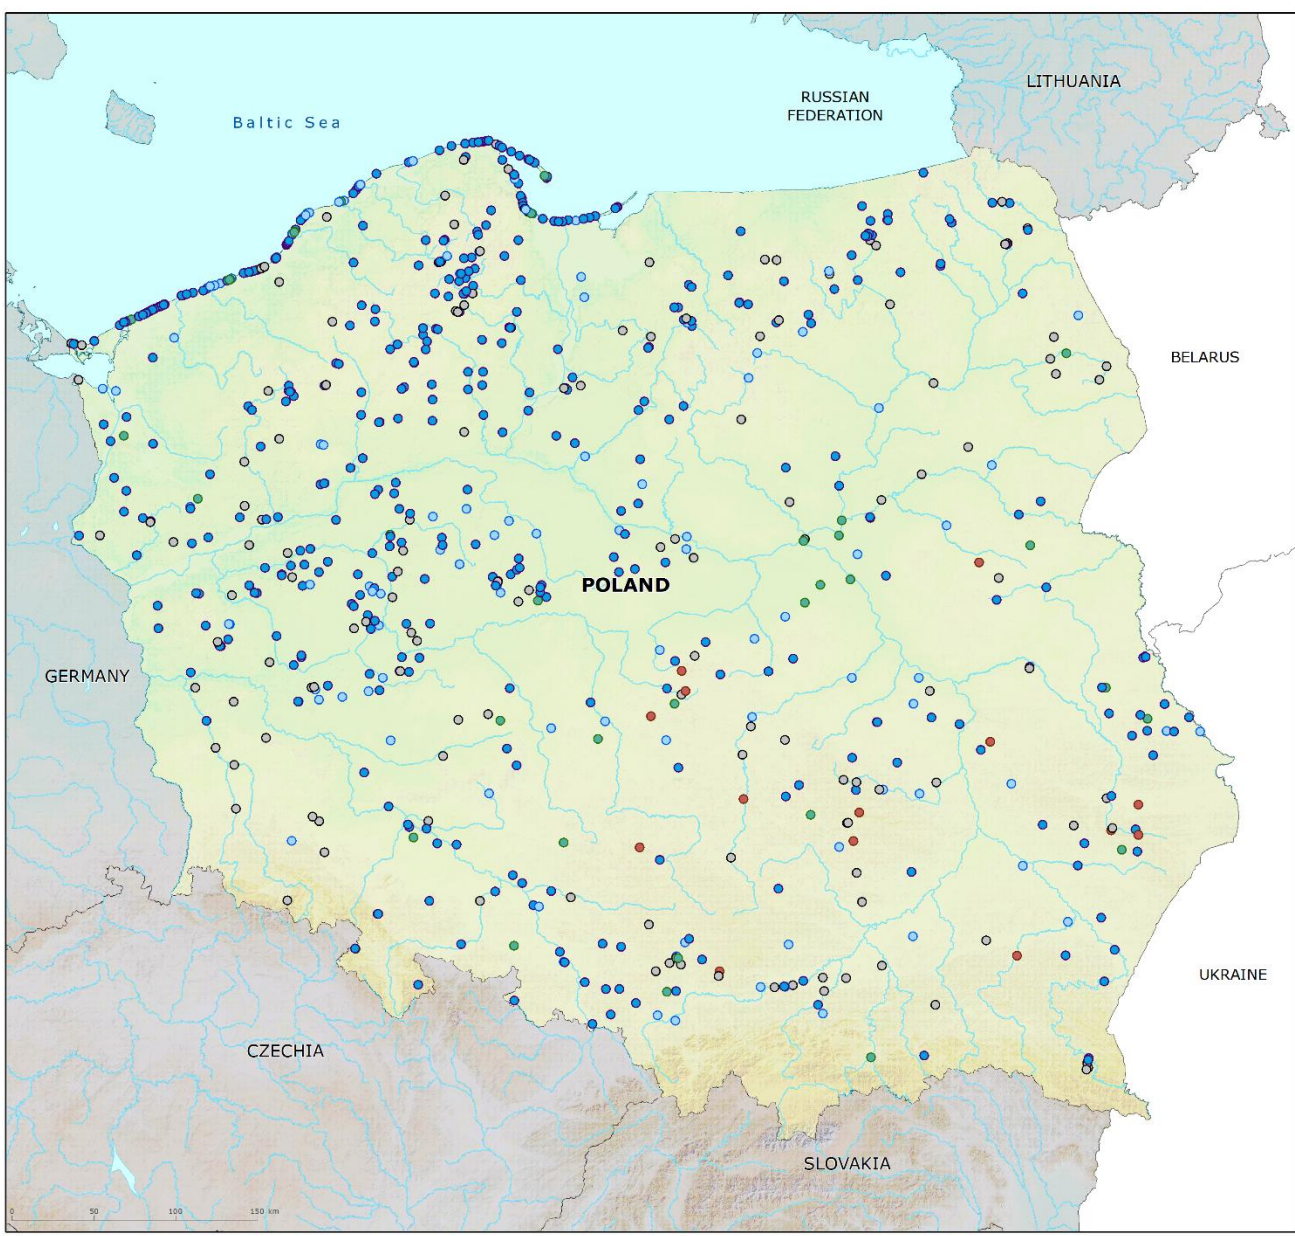

Table 3: Bathing water quality by water category and season

		Total number of bathing waters	Excellent		Good		Sufficient		Poor		Not classified	
			Count	%	Count	%	Count	%	Count	%	Count	%
Coastal	2022	185	94	50.8%	41	22.2%	9	4.9%	3	1.6%	38	20.5%
	2023	187	103	55.1%	37	19.8%	9	4.8%	6	3.2%	32	17.1%
	2024	189	114	60.3%	29	15.3%	23	12.2%	2	1.1%	21	11.1%
	2025	190	123	64.7%	33	17.4%	15	7.9%	0	0.0%	19	10.0%
Inland	2022	523	302	57.7%	64	12.2%	24	4.6%	15	2.9%	118	22.6%
	2023	552	303	54.9%	69	12.5%	24	4.3%	15	2.7%	141	25.5%
	2024	575	330	57.4%	70	12.2%	23	4.0%	18	3.1%	134	23.3%
	2025	589	334	56.7%	79	13.4%	26	4.4%	15	2.5%	135	22.9%
Total	2022	708	396	55.9%	105	14.8%	33	4.7%	18	2.5%	156	22.0%
	2023	739	406	54.9%	106	14.3%	33	4.5%	21	2.8%	173	23.4%
	2024	764	444	58.1%	99	13.0%	46	6.0%	20	2.6%	155	20.3%
	2025	779	457	58.7%	112	14.4%	41	5.3%	15	1.9%	154	19.8%

Note: Percentages may not total to 100 due to rounding.

Annex II Bathing water quality map

Map 1: Bathing waters reported during the 2025 bathing season in Poland

Bathing water quality

- Excellent water quality
- Good water quality
- Sufficient water quality
- Poor water quality
- Not classified
- No data
- Outside data coverage (data available, not presented on the map)
