
Category	Title
NFR: 6.A	Other sources (included in national total for entire territory)
SNAP:	
ISIC:	
Version Guidebook 2019	

1 Overview

This source category provides a 'catch all' for processes not included in any other source category within the NFR structure. All emissions that cannot be placed under a specific NFR source category will be put in this source category. Thus, this may be a very extensive sector covering lots of different activities not covered by other source categories.

Also, the contribution of this source category is thought to be insignificant, i.e. less than 1 % of the national emissions of any pollutant.

We therefore do not provide further information regarding emissions in this chapter. If emissions are reported in this sector, the best way forward would be to search for literature concerning these specific sources. If no information can be obtained from literature, another way to estimate the emissions can be 'expert judgement'. These issues are described in the General Guidance Chapter 5 Uncertainties.

2 Point of enquiry

Enquiries concerning this chapter should be directed to the relevant leader(s) of the Task Force on Emission Inventories and Projection's expert panel on combustion and industry. Please refer to the TFEIP website (www.tfeip-secretariat.org/) for the contact details of the current expert panel leaders.
