* If a bathing water was newly identified during the last assessment period and before the complete four-year dataset of 2016–2019 could be collected – i.e. identified not earlier than 2017 – it is counted as “newly identified”; this is also true if enough samples were collected in a shorter period

** If a bathing water was subject to changes described in BWD Article 4.4.b within the last assessment period, it is assigned management status “Quality changes”. Such status is assigned until the complete four - year dataset of samples taken after changes took effect is available.
