

Noise in Europe

2017 overview of policy-related data

Latvia 

April 2017

The Environmental Noise Directive (END) requires EU member states to assess exposure to noise from key transport and industrial sources with two initial reporting phases: 2007 and 2012. Where the recommended thresholds for day and night indicators are exceeded, action plans are to be implemented. This country fiche presents data related to END assessments as reported to EEA by 15th April 2016 for the two key END indicators: L_{den} (day evening and night exposure) and L_{night} (night time exposure). 2012 strategic noise maps reported are presented, as well as HIA calculations for annoyance and sleep disturbance, hospital admissions and mortality. Trends are presented as the change in exposure from 2007 to 2012, for comparable sources only.

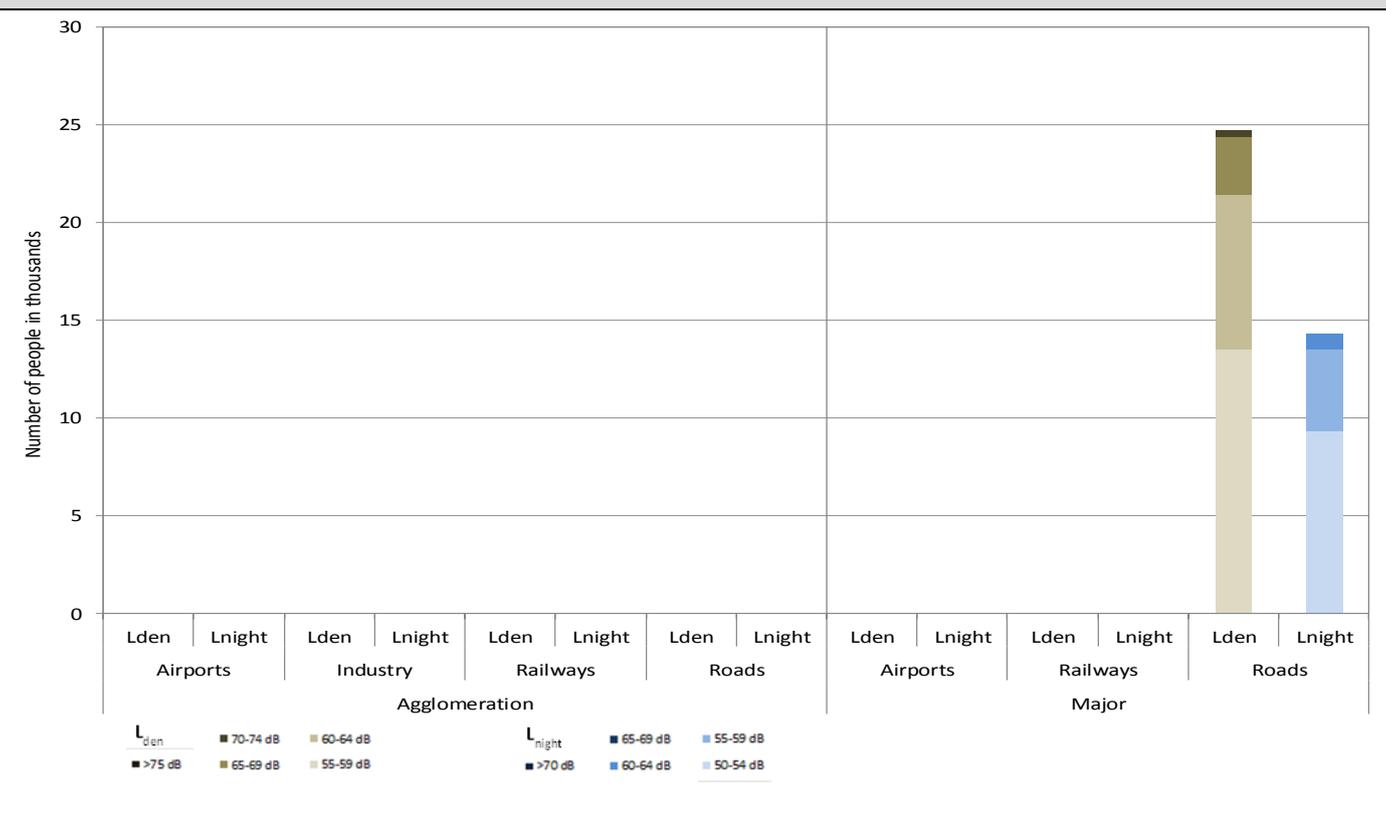

LATVIA

Noise sources covered by this assessment

Agglomerations > 100.000 inhabitants	Daugavpils, Riga 2 agglomerations in total, covering 767.261 inhabitants
Major airports > 50.000 movements per year	Riga International Airport 1 major airport in total
Major roads > 3 million vehicles per year	192 km in total
Major railways > 30.000 train passages per year	60 km in total

Number of people exposed to different noise bands per L_{den} and L_{night} (2012)

Data not provided in 2 agglomerations for aircraft noise, for industrial noise, for railway noise and for road noise, out of 2 agglomerations.

Total number of people exposed to road noise inside agglomerations (2012)

Data not provided for road noise inside agglomerations

Total number of people exposed to railway, aircraft and industrial noise inside agglomerations (2012)

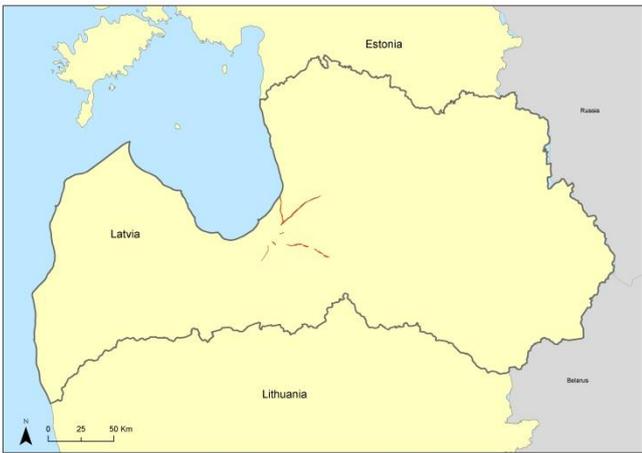

Data not provided for railway, aircraft and industrial noise inside agglomerations

Total number of people exposed to Major Airports outside agglomerations (2012)

Data not provided for Major Airports outside agglomerations

Noise contour maps (2012)

Major roads **Major railways**

No contour maps delivered in spatial format

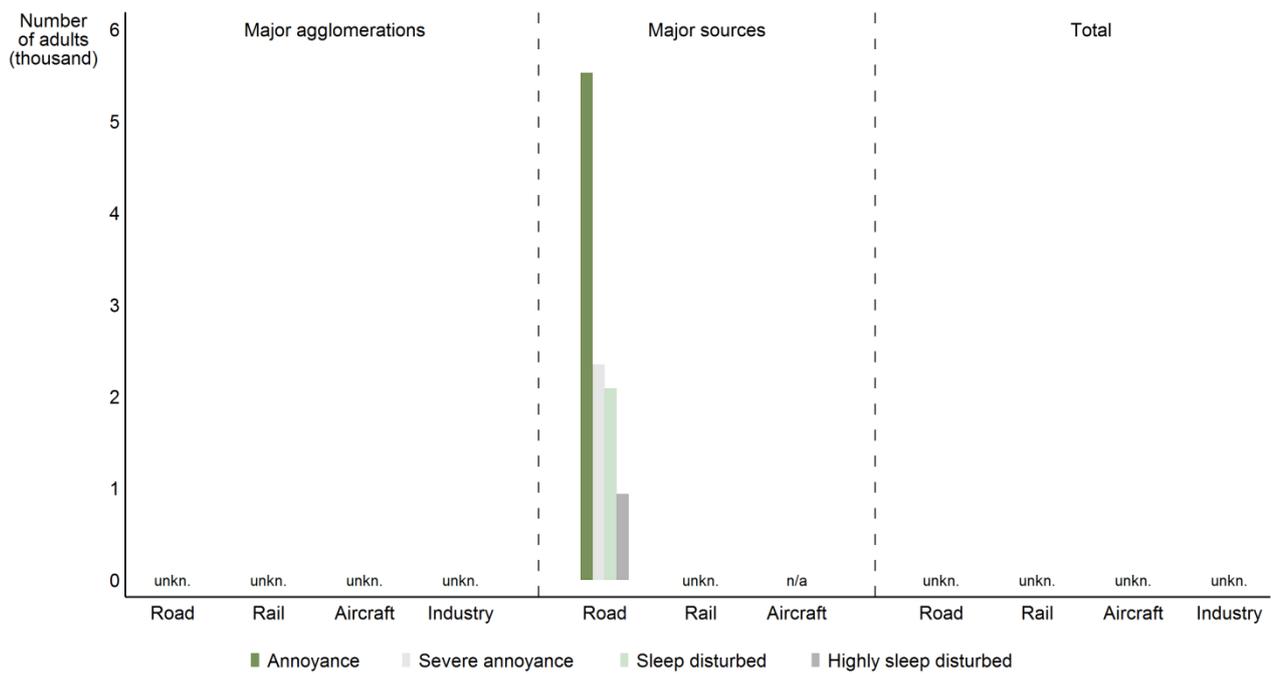

Major airports

Airport	ICAO	Annual traffic
Riga International Airport	EVRA	60087

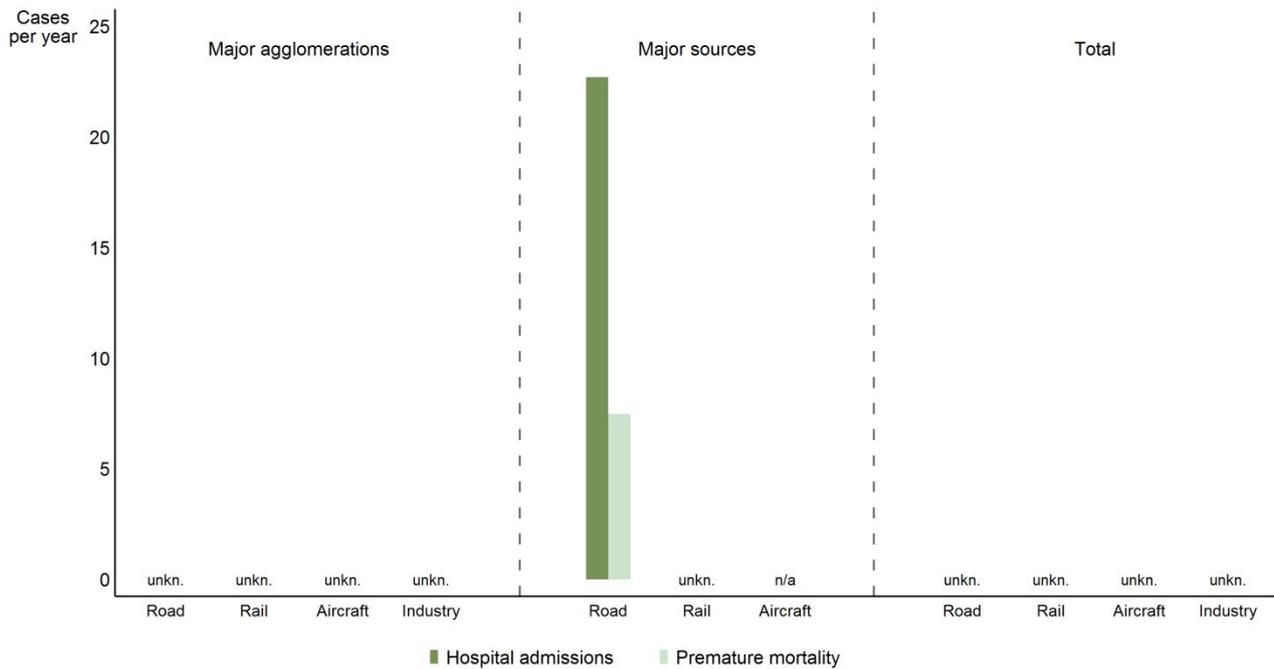

Health impact assessment

Annoyance and sleep disturbance

LV 021026

Hospital admissions and mortality

LV 021026

Trends on noise exposure 2007 - 2012

Trends on noise exposure are shown only in those cases where data is available for both implementation rounds:

- For major airports: total number of people exposed to more than 55 dB Lden and to more than 50 dB Lnight outside agglomerations.
- For agglomerations: percentage of population exposed to more than 55 dB Lden and to more than 50 dB Lnight due to different noise sources.

Major airports:

	L _{den}		L _{night}	
	First Round	Second Round	First Round	Second Round
Riga International Airport	Data not provided or unsuitable for deriving trends			

Agglomerations:

Air (values in %)	L _{den}		L _{night}	
	First Round	Second Round	First Round	Second Round
Riga (*)	Data not provided or unsuitable for deriving trends			

Industry (values in %)	L _{den}		L _{night}	
	First Round	Second Round	First Round	Second Round
Riga (*)	Data not provided or unsuitable for deriving trends			

	Decrease in population exposed
	No change
	Increase in population exposed

Railway (values in %)	L _{den}		L _{night}	
	First Round	Second Round	First Round	Second Round
Riga (*)	Data not provided or unsuitable for deriving trends			

Road (values in %)	L _{den}		L _{night}	
	First Round	Second Round	First Round	Second Round
Riga (*)	Data not provided or unsuitable for deriving trends			

(*) Increase of the number of inhabitants bigger than 10% between 2005 and 2010
